

WeNext

Left Navigation Panel:

Modules in left navigation panel are :

Overview:Get a quick snapshot of your business performance, recent activity, message usage, and key metrics in one centralized dashboard.

Inbox:Manage all customer WhatsApp conversations in one place, assign chats to agents, and respond in real time.

Campaigns:Create, schedule, and send bulk WhatsApp campaigns using approved templates and track delivery performance.

CRM:Store and manage customer data, tags, lead stages, and interaction history to build stronger customer relationships.

Automation:Design smart WhatsApp workflows using triggers, conditions, and logic to automate replies, follow-ups, and customer journeys.

Appointments:Schedule, manage, and automate booking confirmations and reminders directly through WhatsApp.

Commerce:Manage product catalogs, handle orders, and automate order updates and payment notifications.

DataStore:Store and organize structured customer data and custom fields used in campaigns and automation.

Reports:Track campaign performance, agent activity, message analytics, and business insights with detailed reports.

AI:Use AI-powered tools to generate content, optimize workflows, and enhance customer communication.

Account Settings:Manage team members, integrations, billing, business accounts, social connections, and platform configuration.

Support: Access onboarding guides and connect directly with WeNext support via WhatsApp for real-time assistance.

Overview Module

The **Overview Module** provides a high-level summary of your WhatsApp Business performance, account health, and messaging activity. This dashboard helps you quickly understand your business metrics and monitor overall growth trends.

It acts as the central analytics page for your WhatsApp Business account.

WhatsApp Business Account Summary (Top Panel)

At the top of the Overview page, you will find important account-level information:

✓ WhatsApp Business Number

Displays the connected WhatsApp Business number and its current status (Live).

✓ Messaging Limit

Shows the total messaging limit allocated to your account and how many conversations have been used.

Example:

1 of 1,000 used (remaining 999)

This helps you track your available conversation quota.

✓ Account Quality

Indicates the health status of your WhatsApp Business account (e.g., GREEN).
Account quality reflects compliance with WhatsApp policies and messaging behavior.

● View Profile

Clicking on **View Profile** will redirect you to:

Account Settings → Business Accounts

Here, you can manage and update your WhatsApp Business account details.

Key Performance Metrics:

The Overview page displays summary cards showing important performance indicators:

Total Conversations

The total number of WhatsApp conversations initiated within the selected period.

Total Contacts

The total number of contacts stored in your CRM.

Messages

The total number of messages sent and received through your WhatsApp Business number.

Abandoned Cart

Displays the number of abandoned cart events (for eCommerce integrations).

These metrics provide a quick snapshot of customer engagement and activity.

Contacts Growth

The **Contacts Growth** section shows how your contact database is growing over time.

- You can filter data by year using the dropdown (e.g., 2025).
- If no data is available for the selected period, the system will display:
“No data found.”

This helps track audience growth and marketing performance.

Messages Overview:

This section provides a visual representation (donut chart) of:

- Used Conversations
- Remaining Messaging Limit

It helps you understand how much of your allocated quota has been consumed.

This ensures you can plan campaigns without exceeding limits.

Active Conversations

The **Active Conversations** graph displays conversation activity across different time slots during the day.

This helps you identify:

- Peak engagement hours
 - Best time to run campaigns
 - Customer activity patterns
-

Inbox Module

The **Inbox Module** serves as the central communication interface within the WeNext platform. It enables businesses to manage real-time customer conversations efficiently across connected channels. The module is designed to provide complete control over customer interactions while offering advanced messaging and workflow management tools.

Conversation Panel

On the left side of the Inbox, all customer conversations are displayed in a structured list format. Users can search for specific conversations using the search bar and filter conversations as needed. Each conversation preview shows the contact name, the most recent message, and the timestamp for quick reference. Selecting a conversation opens the detailed chat interface on the right.

Chat Header (Top Bar Controls)

The top section of the chat window provides important customer information and conversation management tools:

Contact Information

Displays the customer's name and registered phone number.

Priority Setting

The **Priority dropdown** allows agents to categorize conversations as:

- High
- Medium
- Low

This helps teams manage urgent conversations effectively.

Session Timer

The timer indicates when the customer session started. It automatically resets whenever a new message is received from the customer, helping agents track active session windows.

Scheduled Messages

The alarm icon allows you to view all scheduled messages for that specific contact.

Flow Control

This option enables agents to pause or activate predefined automation flows linked to the conversation.

Customer Profile

The profile icon opens the customer's detailed profile, where stored contact information and history can be accessed.

More Options (Three-Dot Menu)

The three-dot menu provides additional actions, including:

- Viewing scheduled messages:to view scheduled messages
- Blocking the contact:to block the contacts
- Generating a payment link:to generate the custom payment link
- Taking over the conversation from another team member:if we want to assign the customer to another agent or user we can do it by clicking on it .

Chat Composer (Message Input Area)

The message composer at the bottom of the chat window contains multiple tools to enhance communication:

Attachment (Pin Icon)

Allows you to send:

- Images
- Videos
- Documents
- Audio files

Emoji Icon

Enables insertion of emojis into messages.

Template Message

Allows sending pre-approved WhatsApp message templates.

Generate Payment Link

Quickly generate and send custom payment links directly to customers.

Send Product

Send product details directly from the connected commerce catalog.

Scheduled Messages

The clock icon allows you to view previously scheduled messages.

AI Assistant

The AI icon provides intelligent message suggestions to help agents respond faster and more effectively.

Send Button

The send button is used to deliver the typed message instantly.

Schedule Message

The dropdown option next to the send button allows you to schedule a message to be sent at a specific date and time.

Campaigns Module

1.Message Templates Sub-Module

The **Message Templates** sub-module allows users to create, manage, and organize WhatsApp message templates in compliance with Meta (WhatsApp Business API) guidelines. These templates are used to send business-initiated messages such as marketing campaigns, order updates, reminders, and notifications.

This section ensures that all templates are properly structured and approved before being used in campaigns.

Template Tabs Overview

The Message Templates section is divided into three main tabs:

1 Templates

The **Templates** tab displays all templates created by the user within their account. Each template entry includes key details such as:

- Template Name
- Category
- Language
- Status (e.g., Approved, Pending, Rejected)
- Creation Date

Clicking on a template name opens the **Template Preview**, allowing users to view the complete message content and structure.

Filters are available within this tab to help users search and organize templates based on status or category.

2 Template Library

The **Template Library** contains predefined reference templates provided by WeNext. These templates serve as ready-made examples that users can use as a starting point.

Users can:

- Preview any library template
- Click “Use” to open it in the template creator
- Modify and customize it as needed

This feature simplifies the template creation process, especially for first-time users.

Filters are also available in this tab to refine templates based on category, type, or other parameters.

Guidelines

The **Guidelines** tab displays Meta API (WhatsApp Business API) template guidelines. These guidelines outline the rules and compliance requirements necessary for template approval.

It is recommended to review these guidelines before creating a template to increase approval success rates.

Creating a New Template

Users can create a new template by clicking the “**Create Template**” button located at the top right corner of the screen.

WeNext provides two methods for template creation:

AI Template Generation

The AI Template Generation feature allows users to create templates using natural language prompts.

Steps:

1. Describe the message you want to create (e.g., order confirmation, discount offer, appointment reminder).
2. Click **Generate Templates**.
3. The AI generates three template options.
4. Select the preferred template.
5. Edit and refine it as required.

This feature saves time and helps ensure professional formatting.

Manual Template Creation

Users can also create a template manually by filling in the required fields, including:

- Template Name
- Category (e.g., Marketing, Utility)
- Language
- Message Body
- Footer Text (optional)
- Buttons (Quick Reply, URL, Phone, or Flow Button)

Positional variables (e.g., {{1}}, {{2}}) or named variables (e.g., {{name}}, {{order_id}}) can be added to personalize messages dynamically.

Live Template Preview

While creating or editing a template, the right-hand side of the screen displays a **real-time preview**. This allows users to see exactly how the message will appear to customers on WhatsApp.

The preview updates instantly as changes are made.

2. WhatsApp Campaigns Sub-Module

The **WhatsApp Campaigns** sub-module enables users to create, manage, schedule, and analyze WhatsApp marketing campaigns using approved message templates. This module provides complete visibility into campaign performance, delivery metrics, and recipient-level insights.

Campaign Listing Overview

At the top of the module, campaigns are organized into the following tabs:

- **All** – Displays all campaigns
- **Active** – Shows campaigns currently in progress
- **Completed** – Displays campaigns that have finished execution

- **Draft** – Contains campaigns that are saved but not yet sent

These tabs allow users to quickly filter and manage campaigns based on their status.

Each campaign card displays:

- Campaign Name
- Creation Date & Time
- Number of Recipients
- Campaign Status
- Key Performance Metrics:
 - Sent
 - Delivered
 - Read
 - Clicked

Campaign Details View

Clicking on any campaign opens the **Campaign Details** page, which provides comprehensive insights including:

1 Basic Information

- Campaign Name
- Status (Active, Completed, Draft)
- Completion Date & Time
- Campaign Cost
- Cost per Message
- Associated Template

- Campaign Description

2 Statistics

Displays numeric metrics such as:

- Total Targets
- Messages Sent
- Messages Delivered
- Messages Read

These statistics provide a quick snapshot of campaign performance.

3 Timeline

Shows key campaign milestones such as:

- Created Date & Time
- Scheduled Time (if applicable)
- Completion Time

This helps track the campaign lifecycle.

4 Performance Metrics

Performance indicators are shown visually using progress bars, including:

- Sent Rate
- Delivery Rate
- Read Rate

These percentages help evaluate campaign effectiveness at a glance.

5 Campaign Funnel (Visual Representation)

The Campaign Funnel visually represents the message journey through different stages:

- Targets
- Sent
- Delivered
- Read
- Failed (if any)

This graphical representation provides a clear understanding of message flow and drop-off points.

6 Message Targets (Recipient-Level View)

This section displays individual recipient details including:

- Recipient Name
- Phone Number
- Status (Sent / Delivered / Read / Failed)
- Sent Timestamp
- Delivered Timestamp
- Read Timestamp

Additional features include:

- Search by name or phone number
- Filter by status
- Export recipient data
- Add tags to recipients

Creating a New Campaign

Users can create a campaign by clicking the “**New Campaign**” button.

The campaign creation process includes the following steps:

1 Basic Campaign Information

- Enter Campaign Name
- Add Campaign Description (optional)
- Select an Approved Message Template

2 Select Sending Option

Users can choose:

- **Send Immediately** – Campaign is sent instantly
- **Schedule for Later** – Campaign is scheduled for a specific date and time

3 Select Recipients

Recipients can be selected using multiple methods:

- Upload Contacts (.xlsx, .xls, .csv files)
- Send to All Contacts
- Select Target Stages
- Select Specific Tags
- Send to Opt-out Users (optional control)

Opt-out Users

Opt-out users are contacts who have unsubscribed from receiving communications. These users are excluded from campaigns unless explicitly selected, ensuring compliance with messaging regulations.

Retry Failed Recipients

Users can enable automatic retry for failed message deliveries after a specified time.

Estimated Campaign Cost

On the right-hand side of the campaign creation screen, the **Estimated Cost** section displays projected campaign spend based on:

- Selected Template Category
- Number of Recipients
- WhatsApp (Meta) Pricing

This helps users understand expected costs before sending the campaign.

3.Social Media Posts Sub-Module

The **Social Media Posts** sub-module allows users to create, manage, schedule, and monitor posts across multiple connected social media platforms, including **Instagram, Facebook, and LinkedIn**. This module centralizes social publishing and provides engagement insights in one unified interface.

Platform Tabs

At the top of the section, users can switch between:

- **Instagram**
- **Facebook**
- **LinkedIn**

Each tab displays posts specific to the selected platform. Users can view and manage published and scheduled posts individually for each connected account.

Posts Overview Dashboard

The overview section provides performance metrics for the selected platform, including:

- **Total Posts**
- **Total Likes**
- **Total Comments**
- **Average Engagement**

These metrics help users quickly evaluate overall social media performance.

Post Filters

Users can:

- Search posts by caption
- Filter by post type (Image, Video, Carousel, etc.)
- Switch between:
 - **Published Posts**
 - **Scheduled Posts**

Each post card displays:

- Post preview (image/video)
- Caption (if available)
- Number of likes
- Number of comments
- Published date
- “View Details” option for deeper insights

Create Global Post

The **Create Global Post** feature allows users to publish a single post across multiple connected platforms simultaneously.

Key Features:

- Write a common caption

- Add media via:
 - External Public URL
 - File Upload
- Choose publishing time:
 - Publish Now
 - Schedule for Later
- Select target platforms:
 - Instagram
 - Facebook
 - LinkedIn

This feature ensures consistent branding and saves time by avoiding repetitive posting on each platform separately.

⚠ **Note:** Media must be hosted on a publicly accessible URL for certain platforms (e.g., Instagram fetches media from the provided URL).

+ Create Individual Post

The **Create Post** button allows users to create a platform-specific post.

Media Types Supported:

- Image
- Video / Reel
- Carousel (multiple images)

Media Source Options:

- External URL
- Direct File Upload

Caption Section:

Users can:

- Add hashtags (#)
- Mention accounts (@)
- Write platform-specific descriptions

Publishing Options:

- Publish Now
- Schedule for Later

This feature is ideal when content needs to be customized for a particular platform.

Media & Publishing Controls

- One URL per line for multiple media items
- Instagram supports up to 10 items in carousel
- Facebook supports multi-photo posts (limited video support)
- LinkedIn publishes only the first media item

These controls ensure compatibility with platform-specific publishing rules.

CRM Module

1. Leads Sub-Module

The **Leads** sub-module in the CRM system is designed to manage, track, and organize potential customers from initial contact to deal qualification. It provides a centralized view of all lead information, engagement status, ownership, and communication preferences.

This module enables sales and marketing teams to efficiently capture, nurture, and convert leads.

Leads Dashboard Overview

At the top of the Leads section, summary cards provide quick insights into lead activity:

- **New Leads Today** – Number of leads added on the current day
- **High Priority** – Leads marked as important or requiring immediate attention
- **Unsubscribed** – Leads who have opted out of marketing communication

- **No Activity (Last 30 Days)** – Leads with no recent engagement

These metrics help teams prioritize follow-ups and monitor lead health.

Search & Filters

Users can:

- Search leads by name, phone number, or contact details
- Apply filters to narrow results based on status, tags, or other attributes
- Use bulk selection via checkboxes.

This ensures quick access to specific lead segments.

Leads Listing Table

The leads table provides a structured overview with the following columns:

- **Contact Name**
- **Phone Number**
- **Status (Active / Inactive)**
- **Email**
- **Tags**
- **Actions**

Each lead entry shows a status indicator (e.g., Active) and assigned tags such as "Marketing Limit."

Add New Lead

Users can create a new lead manually using the **Add Lead** button.

Basic Information

Required fields:

- Full Name
- Phone Number (with country code selection)

Optional fields:

- Email Address
- Company Name

2 Additional Information

- Job Title
- Website
- Street Address
- City
- State
- Country
- Zip Code
- Reference By (source reference)
- Sales By (assigned sales representative)

This section helps store complete business and contact context.

3 Tags

Users can:

- Select existing tags
- Create new tags
- Categorize leads for segmentation

Tags help in filtering and targeting leads for campaigns and automation.

4 Deal Information

This section captures sales-related data:

- **Source** (e.g., Lead, Campaign, Referral)
- **Deal Size** (expected value)
- **Privacy** (Public / Restricted)
- **Owner** (assign to specific team member)

This helps in tracking ownership and revenue potential.

Campaign Opt-In

The **Campaign Opt-in toggle** determines whether the lead will receive marketing campaigns.

- Enabled → Lead will receive campaign messages
- Disabled → Lead will not receive promotional communications

This ensures compliance with messaging preferences.

Import Leads

Users can bulk import leads using the **Import Leads** button. This feature enables uploading contact lists for mass onboarding into the CRM system.

⚙️ Lead Actions Menu

Each lead has an action dropdown with the following options:

- **Open Lead** – View detailed lead profile
- **Add Activity** – Log calls, meetings, or follow-ups
- **Add Tag** – Categorize the lead
- **Update** – Edit lead details
- **Message** – Send direct communication
- **Block** – Prevent communication
- **Mark Inactive** – Change lead status
- **Delete** – Permanently remove lead

This action menu provides full lifecycle control over each lead.

2. Customers Sub-Module

The **Customers** sub-module is designed to manage and organize confirmed or converted clients within the CRM system. While the Leads module handles potential prospects, the Customers module stores and manages individuals or businesses that have already engaged, purchased, or been converted into active customers.

This module enables businesses to maintain long-term relationships, track customer engagement, and manage communication preferences.

Customers Dashboard Overview

At the top of the Customers section, summary cards provide quick performance insights:

- **New Customers Today** – Number of customers added on the current day
- **High Priority** – Customers marked as important
- **Unsubscribed** – Customers who have opted out of campaign communications
- **No Activity (Last 30 Days)** – Customers with no recent interaction

These metrics help teams identify engagement levels and prioritize follow-ups.

Search & Filters

Users can:

- Search customers by name, phone number, or other contact details
- Apply filters to segment customers
- Select multiple customers using checkboxes for bulk operations

This allows quick navigation and targeted customer management.

Customers Listing Table

The customers table includes the following columns:

- **Contact Name**
- **Phone Number**
- **Status (Active / Inactive)**
- **Email**
- **Tags**
- **Actions**

Each customer displays a status indicator (e.g., Active) and associated tags such as *Marketing Limit* or other segmentation labels.

Add New Customer

Users can manually create a new customer using the **Add Customer** button.

Basic Information

Required fields:

- Full Name
- Phone Number (with country code selection)

Optional fields:

- Email Address
- Company Name

Tags

Users can:

- Assign existing tags
- Create new tags
- Segment customers based on business categories or behavior

Tags help in campaign targeting, automation, and reporting.

Campaign Opt-In

The **Campaign Opt-in toggle** determines whether the customer will receive marketing campaigns.

- Enabled → Customer will receive promotional messages
- Disabled → Customer will not receive campaigns

This ensures compliance with communication consent policies.

Import Customers

The **Import Customers** feature allows bulk uploading of customer data for easy onboarding into the CRM system.

Customer Actions Menu

Each customer has an action dropdown with the following options:

- **Open Lead** (Opens detailed profile view)
- **Add Activity** – Log calls, meetings, or notes
- **Add Tag** – Categorize customer
- **Update** – Edit customer details
- **Message** – Send direct communication
- **Block** – Restrict communication
- **Mark Inactive** – Change status
- **Delete** – Permanently remove customer

This ensures complete lifecycle management and communication control.

3.Leads Board (Kanban View)

The **Leads Board** is a visual Kanban-style interface designed to manage and track leads across different stages of the sales pipeline. It allows teams to monitor deal progress, organize leads by status, and move them seamlessly from one stage to another.

This board provides a real-time overview of pipeline health and sales progression.

Board Overview

The Leads Board displays leads in **column-based stages**, such as:

- **Prospects & Leads**
- **In Conversation**
- **Qualified**
- **Proposal**
- **Closed Won**
- **Closed Lost**
- **Payment**
- **Followups**
- **+ Add New Stage**

Each stage represents a step in the lead lifecycle.

Stage Columns

Each column includes:

- Stage Name
- Lead Count Indicator
- Search Bar (Search Leads within that stage)
- **+ Add Lead to that stage**
- ... Stage Options (Manage stage settings)

Leads are displayed as cards within each column.

Lead Cards

Each lead card displays:

- Contact Name
- Phone Number
- Date & Time Added
- Tags (e.g., Marketing Limit, Shopify)
- Selection Checkbox
- Action Menu (⋮)

This compact layout ensures quick visibility of important details.

Drag-and-Drop Functionality

The Kanban board supports drag-and-drop movement:

- Leads can be moved between stages
- Pipeline progress updates dynamically
- Sales flow becomes visual and intuitive

This allows teams to track conversion progress easily.

Default Pipeline Stages Explained

1 Prospects & Leads

Initial stage where newly added or imported leads appear.

2 In Conversation

Leads currently being engaged via calls, messages, or discussions.

3 Qualified

Leads verified as potential buyers with genuine interest.

4 Proposal

Leads who have received a quotation or offer.

5 Closed Won

Successfully converted customers.

6 Closed Lost

Leads that did not convert.

7 Payment

Leads in payment processing stage.

8 Followups

Leads requiring further engagement or reminders.

+ Add New Stage

Users can create custom pipeline stages using the “**Add New Stage**” option.
This provides flexibility to adapt the CRM workflow to different business models.

Search Within Stage

Each stage includes a search bar that filters leads within that specific column.
This improves navigation in large pipelines.

Lead Count Indicator

Each stage displays the number of leads currently assigned to it.
This helps measure:

- Funnel distribution
- Conversion ratios
- Stage bottlenecks

Stage Management Options

Each stage includes options to:

- Add new leads directly
- Modify stage settings
- Rename or reorder stages (if permitted)

4. Notes & Tags Sub-Module

The **Notes & Tags** sub-module allows users to organize, categorize, and segment contacts (Leads and Customers) using customizable tags. This feature enhances filtering, campaign targeting, and structured contact management.

Tags help businesses group contacts based on behavior, source, priority, integrations, or any custom classification.

Module Overview

The Notes & Tags page displays:

- All created tags in card format
- Tag color indicator
- Tag name
- Tag description (if available)
- Number of contacts associated with each tag
- Manage option
- Search functionality
-  New Tag button

This provides a centralized tagging system across the CRM.

Tag Cards

Each tag is displayed as a card containing:

-  Selection checkbox (for bulk actions)
-  Tag color indicator (with HEX code)
-  Tag name
-  Optional description
-  Number of associated contacts
-  Manage option
-  More options menu

Tag Color System

Each tag has a color assigned to it, represented by a HEX code (e.g., #3B82F6).

Color coding helps:

- Visually differentiate categories
- Quickly identify tag type
- Improve UI clarity across modules

Create New Tag

Users can create a tag using the **New Tag** button.

Tag Creation Fields

1 Tag Name (Required)

The primary label for categorizing contacts.

Example: Lead, Customer, VIP, Shopify.

2 Tag Color

Choose a color for visual identification.

Color is stored in HEX format.

3 Description (Optional)

Add context explaining the purpose of the tag.

Example: “Tracks marketing campaign limit (max 2 per 24 hours).”

Search Tags

The search bar allows users to quickly locate tags by name.

This is useful when managing a large number of tags.

Tag Management Options

Each tag includes options to:

- Edit tag details
- Manage associated contacts
- Delete tag (if allowed)

Contact Count Indicator

Each tag displays the number of contacts assigned to it.

Example:

- Marketing Limit → 6044 Contacts
- Shopify → 112 Contacts

This helps monitor segmentation size and campaign targeting.

Automations Module

1. WhatsApp Automation

The **WhatsApp Automation** sub-module enables businesses to create, manage, and optimize automated workflows for their WhatsApp Business account. It allows users to build trigger-based flows that automatically respond to customer actions, events, and integrations.

This module helps streamline communication, improve response time, and automate sales, support, and marketing interactions.

Dashboard Overview

At the top of the WhatsApp Automation page, key performance metrics are displayed:

- **Executions** – Total number of automation runs
- **Active** – Number of currently active flows
- **Success Rate** – Percentage of successfully completed runs
- **Total** – Total number of automation flows created

These insights help monitor automation performance and system efficiency.

Flow Management Panel

Users can:

- Search flows by name

- Filter flows by status
- View flow details including:
 - Flow Name
 - Status (Active / Draft / Paused)
 - Trigger Type
 - Number of Runs
 - Success Rate

Each flow has an action menu (⋮) for management options.

Create Automation

Users can create automation in two ways:

Manual Flow Creation

Using the **Create Automation** button to build workflows from scratch.

AI Automation Builder

Using **AI Automation Builder**, where users describe their requirement and the system generates a draft automation flow automatically.

AI Automation Builder

The **Generate Flow with AI** feature allows users to:

- Describe the automation requirement
- Automatically generate a structured flow
- Optionally include AI-generated descriptions
- Review and refine before publishing

Example use case:

“I need an appointment booking flow that collects customer details and sends confirmation.”

This reduces setup time and simplifies complex flow creation.

Flow Builder Interface

The Flow Builder provides a visual drag-and-drop workspace.

Key Components:

Starting Step

The entry point of the flow.

Example trigger: **Message Keyword (hello, hi, start)**

Available Triggers

The system supports multiple trigger types:

- Starting Step (Flow Entry Point)
- Webhook Trigger (External API trigger)
- Campaign Button Trigger
- Google Sheet Trigger (New row added)
- Order Created
- Order Updated
- Abandoned Cart
- New Subscriber

These triggers initiate the automation workflow.

Node-Based Workflow

Flows are created using nodes connected visually.

Each node represents an action such as:

- Send Message
- Collect Input
- Condition Check
- Delay
- API Call
- Data Store Update

Users can:

- Drag nodes into the workspace
- Connect nodes logically
- Duplicate or delete nodes
- Validate flow structure

Flow Status & Controls

At the top of the flow builder, users can:

- Undo / Redo changes
- Save draft
- Validate flow
- Publish flow
- View readiness status

Flow statuses include:

- Draft
- Active
- Paused

Flow Action Menu Options

Each automation flow includes management options:

- Rename
- Show QR Code
- Duplicate
- View Active Contacts
- Pause
- Delete

This ensures complete lifecycle control of automation flows.

Publishing & Validation

Before activation, flows can be validated to ensure:

- Proper node connections
- Valid triggers

- Required message configurations
- No broken paths

Once validated, users can publish the flow to go live.

2. WhatsApp Forms Sub-Module

The **WhatsApp Forms** sub-module allows businesses to create, manage, and publish structured interactive forms directly inside WhatsApp. These forms are synced with the Meta Business Account and enable structured data collection from customers within chat.

This module is ideal for lead capture, appointment booking, surveys, onboarding, feedback, and data collection workflows.

WhatsApp Forms Dashboard

The main WhatsApp Forms screen provides:

Search Bar

Allows users to search forms by name.

Sync with Meta

Synchronizes forms with the connected Meta Business Account to ensure published forms are up to date.

New Form

Creates a new WhatsApp Form using the Flow Builder.

Forms List Table

Each form displays:

- **Flow Name**
- **Flow ID**
- **Status** (Published / Draft)
- **Categories**
- **Last Updated**
- **Actions Menu** (⋮)

⚙️ **Actions Menu Options:**

- Open Builder
- Delete

This allows users to edit or remove forms easily.

WhatsApp Flow Builder(form creation)

When creating or editing a form, users are redirected to the **WhatsApp Flow Builder**.

Builder Modes

Two editing modes are available:

1 Visual Builder

Drag-and-configure interface for creating form screens.

2 JSON Editor

Advanced editing mode for directly modifying the flow structure in JSON format.

Visual Builder Interface

The builder consists of three main sections:

1 Flow Settings Panel

- **Flow Name**
- Flow Status (Draft / Published)
- Mode indicator (Basic Mode)

2 Screens Section

Forms are structured into **Screens**.

Each screen can:

- Be marked as **START**
- Be marked as **TERMINAL**

- Be reordered
- Be edited or deleted

Users can:

-  Add new screens
- Organize screen sequence

Each screen acts as a step in the WhatsApp form journey.

Edit Content Section

Each screen contains configurable content blocks.

Editable Fields:

- **Screen Title**
- **Screen ID**

Content Blocks

Users can add and configure components that appear on each screen.

Default Blocks:

- Body Text
- Footer

Add Components

The system allows adding different component types:

Available Components:

- **Text** – Display static text
- **Media** – Add images or media content
- **Text Answer** – Capture free text input
- **Media Upload** – Allow users to upload images/files
- **Selection** – Multiple choice or selectable options
- **Date & Time** – Capture date and time inputs

This enables dynamic and structured data collection.

Live Preview Simulation

On the right side, a mobile preview simulation displays how the form will appear inside WhatsApp.

This allows users to:

- Instantly see layout changes
- Validate screen flow
- Review customer experience before publishing

Generate with AI

The builder includes a **Generate with AI** feature.

Users can:

- Describe the form purpose
- Automatically generate structured screens
- Create input fields and flow structure
- Save time in building complex forms

More Actions Menu

Additional builder options include:

- Clean Images
- Save Draft
- Request Preview
- Publish to WhatsApp

Publishing Process

Forms must:

1. Be saved as draft
2. Validated
3. Published to WhatsApp

Once published, they are available inside the connected WhatsApp Business environment.

3. Form Submissions (Form Data) Sub-Module

The **Form Submissions** sub-module allows users to view, filter, manage, and export data collected through WhatsApp Forms. It serves as the centralized data repository for all responses submitted via published WhatsApp Flows.

This module ensures that structured form responses are accessible, traceable, and exportable for business operations.

Form Data Dashboard

The Form Data page provides a structured table view of all submissions collected from WhatsApp Forms.

Configuration Requirement Notice

At the top of the page, an important configuration alert is displayed:

The Flow response does not automatically include the Flow ID. You must include the Flow ID in the `flow_token` field of your Flow payload to correctly identify and map corresponding Flow submissions.

Purpose:

This ensures:

- Accurate mapping between form and submission
- Correct data association
- Reliable reporting and filtering

Without the `flow_token`, submissions may not link properly to their respective forms.

Search & Filter Options

Users can refine submission data using:

Search Bar

Search submissions by:

- Sender number
- Field value

- Keywords

Flow Dropdown Filter

Allows filtering submissions by specific WhatsApp Form.

Example dropdown items:

- alien blues
- Diagnostics
- general hospital form
- New WhatsApp Flow-test
- Teja sarees flow
- experium event booking

This enables segmented data viewing per form.

Submissions Table Structure

Each row represents one form submission.

Columns Include:

- **Sender** – WhatsApp number of the user who submitted the form
- **Submitted At** – Timestamp of submission
- **Flow Token** – Unique Flow ID identifier
- **Dynamic Form Fields** – Captured inputs from the form

Example dynamic columns:

- Text Input fields
- Checkbox Groups
- Selection fields
- Custom input identifiers

Column names are auto-generated based on form components.

Dynamic Field Mapping

Each published WhatsApp Form generates unique field identifiers such as:

These represent the internal component IDs created in the Flow Builder.

This allows:

- Accurate backend mapping
- Structured database storage
- Reliable export formatting

Export Functionality

Users can export submission data using the **Export** button.

Export capabilities allow:

- Downloading form responses
- Data analysis in external tools
- Sharing with operations teams
- CRM data import

Exported data includes:

- Sender details
- Timestamp
- Flow token
- All captured form fields

Pagination & Result Count

The system displays:

- Number of results shown
- Total result count
- Page navigation controls

This ensures scalability for large datasets.

4.Instagram Automation Sub-Module

The **Instagram Automation** sub-module enables businesses to create intelligent automation workflows for Instagram. It allows automated responses to DMs, comments, product inquiries, and lead generation interactions — helping brands engage with their audience 24/7.

This module is designed to automate conversations, capture leads, and increase engagement directly from Instagram.

Instagram Automation Dashboard

The main Instagram Automation screen includes:

◆ Header Information

- Connected Instagram account (e.g., @beejotter)
- Description: Create intelligent automations to engage with your audience 24/7.

● Action Buttons

- **View Leads** – Opens the Captured Leads section
- **New Automation** – Start creating a new Instagram automation flow

📁 Flow Categories Tabs

Users can filter automation flows by:

- **All Flows**
- **Auto DM**
- **Product**
- **Leads**

This categorization helps manage automation types efficiently.

Empty State (No Automations)

If no automation exists, the system displays:

- “No automations found”
- CTA: **Create First Flow**

This encourages users to start building their first automation.

Create Automation Flow

When clicking **New Automation**, a modal appears:

Step 1 of 1 – Choose Automation Type

Users must select one automation type before proceeding.

◆ Available Automation Types

1 Auto Reply DM

Automatically replies to Instagram direct messages with predefined responses.

Use Case:

- Welcome messages
- FAQ auto responses
- Instant replies to first-time messages

2 Product Automation

Automatically reply to comments and send product details via DM.

Use Case:

- Comment “Price” → Send product details
- Comment “Link” → Send product URL
- Instagram shop integration

This is ideal for e-commerce brands.

3 Lead Generation

Capture leads by collecting information from users via automated conversations.

Use Case:

- Collect name, phone, email
- Event registration
- Service inquiries
- Booking requests

Captured leads are stored in the system and visible under **View Leads**.

Captured Leads Section

The **View Leads** button redirects to the Captured Leads dashboard.

Lead Overview Cards

Displays summary metrics:

- **Total Leads**
- **Pending**
- **Completed**
- **Archived**

This helps monitor lead pipeline progress.

Lead Status Filters

Users can filter leads by:

- All
- Pending
- Completed
- Archived

This enables organized lead management.

Empty State (No Leads)

If no leads are captured, the system displays:

“No Leads Found – Create a lead generation flow to start capturing leads.”

This ensures users understand how to begin.

Instagram Automation Workflow Process

- 1 User interacts with Instagram (DM, comment, keyword)
- 2 Automation triggers based on selected type
- 3 System sends automated response
- 4 If Lead Generation → user details captured
- 5 Leads stored in CRM
- 6 Business manages lead status

⚙️ Automation Capabilities

Instagram Automation supports:

- Auto DM replies
 - Comment-triggered responses
 - Product information sharing
 - Lead capture forms
 - Status-based lead management
 - CRM integration
-

Appointments Module

Overview Sub-Module

The **Overview** sub-module provides a high-level summary of your scheduling activity. It gives quick insights into meetings, event types, and total bookings, while allowing users to create new event types.

This dashboard acts as the control center for managing appointments.

Overview Dashboard

When users navigate to:

Appointments → Overview

They see a summary dashboard with metrics and upcoming bookings.

Header Section

- Welcome message (e.g., *Welcome back, User*)
- **+ New Event Type** button (Primary CTA)

The New Event Type button allows users to create a new meeting configuration.

Summary Cards

The overview dashboard displays three key statistics:

1 Upcoming Meetings

- Shows the number of upcoming scheduled meetings.
- Helps users quickly see what's scheduled next.

2 Active Event Types

- Displays the total number of active event types.
- Event types define meeting formats (e.g., Discovery Call, Team Sync).

3 Total Bookings

- Total number of bookings received across all event types.
- Includes past and upcoming meetings.

These cards provide a quick performance snapshot

Upcoming Bookings Section

Below the summary cards is the **Upcoming Bookings** section.

Displays:

- Invitee Name
- Date
- Time
- Event Type Name
- Arrow to view meeting details

Example:

- Kalki Venkatesh
- Feb 28 | 12:00 PM
- Kalki Personal Meeting

There is also a **View All** option to navigate to the full meetings list.

Create Event Type (From Overview)

Clicking **New Event Type** opens a modal to configure a new meeting type.

Create Event Type Modal

Users must configure several fields:

Basic Information

Event Name (Required)

Name of the meeting type.

Examples:

- Discovery Call
- Strategy Session
- Team Sync

Duration (Required)

Set meeting length in minutes.

Example:

- 15 minutes
- 30 minutes
- 60 minutes

Description (Optional)

Explains what invitees can expect from the meeting.

Hosts (Required)

Select one or more hosts for the meeting.

- Primary host is marked.
- Multiple hosts can be selected.

Event Customization

Event Color

Choose a color to visually identify the event in the calendar.

Location Options (Required – at least one)

Users can select one or multiple meeting locations:

1 Google Meet

- Auto-generates video conference link.

2 Phone Call

- Requires phone number.

3 In Person

- Requires physical location.

4 Custom Link

- Add Zoom, Teams, or any external meeting link.

Invitees choose their preferred option while booking.

Email Reminders (Optional)

Users can configure up to two reminders:

- First reminder (default 24 hours before)
- Second reminder (default 1 hour before)

Reminder emails are sent automatically to both host and invitee.

Appointment Workflow (Overview Level)

- 1 Admin creates Event Type
- 2 Availability slots are configured (in Availability Slots module)
- 3 Booking link is shared

- 4 Invitee selects time
- 5 System auto-generates meeting (with location link)
- 6 Email reminders are sent
- 7 Meeting appears under Upcoming Bookings

2.Scheduling Sub-Module (Scheduling Events)

The **Scheduling** sub-module allows users to create, manage, edit, activate, and view all event types used for booking meetings.

This section acts as the **Event Type Management Hub**.

Scheduling Events Dashboard

When users navigate to:

Appointments → Scheduling

They see a grid/list of all created event types.

Header Section

- Title: **Scheduling Events**
- Description: Create and manage your event types for meetings
- CTA Button: **+ New Event Type**

Event Type Cards

Each event type appears as a card with the following details:

◆ Event Icon

Calendar icon representing a meeting type.

◆ Status Badge

- ACTIVE (Green)
- (Future: Inactive/Disabled support possible)

◆ **Event Name**

Example:

- Kalki Personal Meeting
- Amrutha Fashions
- Renu Designers
- Testing
- Hospital Booking
- Teja Sarees

◆ **Booking URL Slug**

Example:

/kalki-personal-meeting
/amrutha-fashions
/renu-designers-zazf

This is the public booking link for invitees.

◆ **Duration**

Displays event duration (e.g., 30 minutes, 60 minutes)

◆ **Card Actions**

Each card includes:

 **Edit**

Opens the **Edit Event Type** modal

 **View**

Allows previewing the booking page

: More Options (3-dot menu)

(Expandable for future actions like deactivate, duplicate, delete)

Create Event Type (From Scheduling)

Clicking **New Event Type** opens the Create Event Type modal.

Create Event Type Modal

Used to configure a new bookable meeting type.

Basic Details

Event Name (Required)

Defines the meeting title shown to invitees.

Duration (Required)

Meeting length in minutes.

Description (Optional)

Information displayed on booking page explaining meeting purpose.

Hosts (Required)

- Select one or more team members.
- First selected host becomes **Primary Host**.
- Supports round-robin distribution if multiple hosts selected.
- Displays:
 - Host initials
 - Name
 - Primary tag
 - Remove (X) option

Event Customization

Event Color

Choose color for calendar visualization.

Location Options (At Least One Required)

Invitees choose preferred location during booking.

Available Options:

- ☒ Google Meet
 - Auto-generates video link
- ☐ Phone Call
 - Requires phone number
- ☐ In Person
 - Requires physical address
- ☐ Custom Link
 - Zoom / Teams / external link

5 Email Reminders (Optional)

Automated reminders sent before meeting.

- First Reminder (default: 24 hours before)
- Second Reminder (default: 1 hour before)

Configurable dropdown timing.

Modal Actions

- Cancel
- Create Event Type

Edit Event Type

Clicking **Edit** opens the Edit Event Type modal.

Editable Fields

- Event Name
- Duration
- Description
- Hosts
- Event Color
- Location Options
- Email Reminders

Save Changes

- Updates event configuration
- Changes reflect immediately on booking page
- Existing bookings remain unaffected unless core settings changed

Scheduling Workflow

- 1 User creates Event Type
- 2 Sets duration and host
- 3 Configures location options
- 4 Enables reminders
- 5 Saves event
- 6 Shares booking URL
- 7 Invitees book slot
- 8 Meeting created automatically

3. Meetings Sub-Module

The **Meetings** sub-module allows users to view, filter, search, and manage all scheduled bookings across event types.

This section serves as the **Booking Management Center**.

Meetings Dashboard

When users navigate to:

Appointments → Meetings

They see a list of all scheduled bookings.

Header Section

- Title: **Meetings**
- Description: View and manage your scheduled bookings

Search & Filter Controls

The top section includes powerful filtering tools:

Search Bar

Users can search by:

- Guest Name
- Guest Email

Example:

Search guest name or email...

This helps quickly locate a specific booking.

Filter Dropdowns

1 Time Filter

Default: **Upcoming**

Options may include:

- Upcoming
- Past
- All

2 Status Filter

Default: **Any Status**

Possible statuses:

- Confirmed
- Cancelled
- Rescheduled
- Completed

3 Event Type Filter

Default: **All Event Types**

Allows filtering meetings by specific event types.

Meeting Card Layout

Each scheduled booking appears as a structured card.

◆ **Guest Information**

- Guest Name (e.g., Kalki Venkatesh)
- Event Type Tag (e.g., Kalki Personal Meeting)
- Guest Email Address

◆ **Date & Time**

Displays:

- Date (e.g., Sat 28 Feb)
- Time (e.g., 12:00)

◆ **Status Badge**

Displays booking status on the right side:

Example:

- confirmed (Black badge)

Possible statuses:

- Confirmed
- Cancelled
- Rescheduled
- Completed

4. Availability Slots Sub-Module (Time Slots)

The **Availability Slots** sub-module allows users to configure their working hours and timezone for booking meetings.

This section controls **when invitees can book appointments**.

Time Slots Dashboard

When users navigate to:

Appointments → Availability Slots (Time Slots)

They can configure:

- Timezone
- Weekly availability schedule
- Working hours per day

Timezone Configuration

Timezone Section

Users must set their timezone to ensure accurate booking times.

Fields:

- **Timezone Dropdown**
Example: India (IST)
- Auto-detected zone:
Example: Asia/Calcutta

Why Timezone Matters

- Ensures correct booking time for host
- Automatically adjusts for invitee timezone
- Prevents scheduling conflicts
- Syncs properly with calendar integrations

Weekly Hours Configuration

This section allows users to define available days and time ranges.

◆ Day Toggle System

Each day of the week has:

- Enable/Disable Toggle
- Start Time
- End Time

● Enabled Day Example

Monday

09:00 AM → 05:00 PM

This means invitees can book meetings within this time range.

Disabled Day Example

Saturday → Unavailable

Sunday → Unavailable

If toggle is OFF:

- No slots will be generated
- Invitees cannot book meetings on that day

Time Range Selection

For enabled days, users define:

- Start Time
- End Time

Example:

09:00 AM to 05:00 PM

System generates available booking slots within that window based on event duration.

5.Calendar Integrations Sub-Module

The **Calendar Integrations** sub-module allows users to connect external calendar services to automatically sync meetings, prevent conflicts, and generate video conference links.

This section ensures seamless scheduling and real-time availability validation.

Add Calendar Dashboard

When users navigate to:

Appointments → Calendar Integrations

They can:

- Connect Google Calendar
- Enable Google Meet
- Manage integration status
- Disconnect connected accounts

Google Calendar Integration

◆ Purpose

Google Calendar integration enables:

- Automatic booking sync
- Real-time conflict detection
- Prevention of double bookings
- Automatic calendar event creation

◆ Status Indicators

Connected

Shows when Google Calendar is successfully linked.

Displays:

- Connected email account
- Connected user name
- Disconnect button

Example:

- Sahith Kumar Illandula (sahith@wenext.ai)

◆ What Happens When Connected

- ① When a meeting is booked
- ② System checks Google Calendar for conflicts
- ③ If slot is free → Booking confirmed

- 4 Event automatically created in Google Calendar
- 5 If slot is busy → Slot hidden from booking page

◆ Disconnect Option

Clicking **Disconnect**:

- Removes calendar sync
- Stops conflict checking
- Stops automatic event creation
- Does NOT delete already created events

Google Meet Integration

◆ Purpose

Google Meet integration allows:

- Automatic video link generation
- Unique meeting URL per booking
- Seamless virtual meeting setup

◆ Status Indicators

Active Integration

Indicates Meet link generation is enabled.

READY Badge

System is prepared to generate meeting links.

◆ How It Works

When:

- Event type has Google Meet enabled
- Booking is confirmed

System automatically:

- Generates unique Google Meet link

- Attaches link to calendar event
- Sends link via confirmation email

No manual meeting creation required.

Commerce – module

Overview(sub-module)

The **Overview** section provides a quick snapshot of your store's performance.

Key Metrics

- **Total Revenue** – Earnings for selected date range
- **Total Orders** – Number of completed orders
- **Active Products** – Products currently available
- **Average Order Value (AOV)** – Revenue per order

Sales Overview

A 30-day revenue graph showing daily sales trends and performance spikes.

Top Products

Lists best-selling products based on revenue and quantity sold.

Date Filter & Report

- Select custom date range
- Download performance report

2.Commerce – Products Catalogs(sub module)

The **Catalogs** module allows businesses to manage their WhatsApp product catalog, collections, and storefront settings integrated with Meta.

1 Products

Manage all catalog products in one place.

Key Features:

-  **Search Products**
-  **Sync from Meta**
-  **Import Products**
-  **Add Product**
-  **Edit / Delete Products**

Product Details Include:

- Name & Description
- Price & Currency
- Category & Brand
- Availability (In Stock / Out of Stock)
- Product URL
- Product Images (Upload or via URL)
- Product Sets Assignment

This ensures products are properly listed in the WhatsApp Business catalog.

2 Collections (Sets)

Organize products into logical groups for WhatsApp list messages.

Features:

- View total products (e.g., All Products – 816 items)
-  Create new product sets
- Assign products to specific sets

This helps structure catalog browsing and improves customer navigation.

3 Settings

Manage catalog connection and storefront behavior.

Catalog Connection:

- View Catalog Name & ID
- Check Connection Status
- Disconnect Catalog if needed

Storefront Preferences:

- Toggle “**Add to Basket**” button
- Show/Hide **Catalog Icon** in WhatsApp profile

These settings control how customers interact with your store on WhatsApp.

3.Commerce – Orders(sub-module)

The **Orders** module allows businesses to manage and track all orders received through WhatsApp and connected commerce channels. It acts as the central order management system for processing, monitoring, and fulfilling customer purchases.

Order Management Dashboard

The Orders dashboard provides a structured table view of all incoming orders with the following details:

Order Information

- **Order ID** – Unique system-generated order reference (e.g., ORD-363272-F5283ACD)
- **Order Date** – Displays the date the order was placed

This helps in tracking and referencing specific transactions.

Source

Shows where the order was generated from:

- **WhatsApp** (primary source shown in the interface)

This helps businesses identify the sales channel.

Customer

Displays customer details:

- Customer Name (or Guest if not logged in)
- Associated customer information (if available)

Useful for customer follow-ups and support.

Fulfillment Status

Indicates order processing stage:

- **Pending** – Order is received but not yet processed or fulfilled

(Other statuses typically include Processing, Shipped, Delivered, Cancelled – depending on system configuration.)

This helps the operations team manage delivery workflow.

Payment Status

Displays the payment state:

- **Pending** – Payment not yet completed or confirmed

(Other possible statuses: Paid, Failed, Refunded.)

This ensures finance tracking and prevents dispatch before payment confirmation.

Total Amount

Displays total order value in the selected currency (e.g., ₹ 319).

This provides quick financial visibility per order.

Search & Filters

The module includes:

- **Search Bar** – Search by Order ID, customer name, or related data
- **Order Filter Dropdown** – Filter by order status (e.g., All Orders)

This enables faster navigation, especially for high-volume businesses.

Order Actions

Each order includes an action menu (⋮) with the following options:

View Details

Opens the complete order breakdown including:

- Ordered products
- Customer details
- Payment information
- Fulfillment information

This is used for order verification and support resolution.

Download Invoice

Generates and downloads the invoice for:

- Customer sharing
- Accounting records
- Compliance documentation

4.Commerce – Abandoned Carts(sub module)

The **Abandoned Carts** section allows businesses to track and recover incomplete checkouts from customers.

Currently, this feature requires a **Shopify store connection** to function.

Shopify Integration Required

To enable abandoned cart tracking:

- The business must **connect their Shopify account**.
- Once connected, the system will automatically fetch:
 - Abandoned checkouts
 - Customer details
 - Cart items
 - Cart value

This allows businesses to follow up with customers and recover lost sales directly from the dashboard.

Current Status

If Shopify is not connected:

- Abandoned cart data will not be visible.
- Recovery workflows cannot be triggered.

To activate this feature, simply click “**Connect Shopify**” and complete the integration process.

5.Commerce – Payment History(sub module)

The **Payment History** module provides a complete record of all payments processed through Razorpay. It allows businesses to monitor transaction statuses, verify successful payments, and maintain financial transparency.

This section acts as the financial tracking system for all commerce-related transactions.

Payment Dashboard Overview

The Payment History table displays the following details for each transaction:

Payment ID

- Unique Razorpay-generated transaction reference (e.g., `pay_SGqaI0VsUKLA`)
- Used for tracking and reconciliation purposes.

Amount

- Displays the total payment amount received.
- Shown in the selected currency (e.g., ₹1.00).

This ensures quick visibility of transaction values.

Payment Status

Indicates the transaction state:

- **Paid** – Payment successfully completed.

(Other possible statuses may include Failed, Pending, Refunded depending on system behavior.)

This helps confirm whether an order can proceed to fulfillment.

Payment Method

Displays the payment channel used by the customer:

- UPI
- (Other possible methods: Cards, Net Banking, Wallets, etc.)

This provides insights into preferred customer payment methods.

Date & Time

- Shows the exact timestamp of when the transaction was completed.
- Useful for accounting, audits, and dispute resolution.

Search & Filters

The module includes:

- **Search Bar** – Search by:
 - Payment ID
 - Customer Name
 - Email
 - Related transaction details
- **Status Filter Dropdown** – Filter payments by status (e.g., All Status, Paid, Failed).

This enables quick financial lookup, especially for high transaction volumes.

Data Stores Module

The **Data Stores** module allows businesses to create, manage, and control custom database tables directly within the platform. It acts as an internal data management system where structured records can be stored, edited, accessed via APIs, and used inside automation workflows.

This module is useful for storing operational, transactional, or customer-related data.

Data Stores Dashboard

The main dashboard displays all created data stores (tables).

Each data store card shows:

- **Store Name** (e.g., Orders, Cart, Customer)
- Number of **Columns**
- Number of **Records**

- Creation date
- Action menu (Edit/Delete options)

Search

You can search data stores using the search bar.

Create Data Store

Click “**Create Data Store**” to create a new table.

2 Creating a Data Store

When creating a new store:

Required Fields:

- **Name** – Table name (e.g., Products, Orders, Tickets)
- **Description** – Purpose of this data store

Once created, the data store becomes a structured database table where you can define schema and manage records.

3 Inside a Data Store

Each data store contains four main sections:

- **Data Grid**
- **Schema & Fields**
- **Permissions**
- **API & Settings**

4 Data Grid

The **Data Grid** displays all records stored inside the table.

Features:

- View records in tabular format

- Search records
- Filter by date range
- Customize visible columns
- Export records to Excel
- Add new records manually

Add Record

You can manually insert new records by filling field values (based on schema).

This section acts like a spreadsheet for structured data.

Schema & Fields

This section defines the structure of the data store.

Each field includes:

- **Field Name**
- **Column Name (system generated)**
- **Data Type** (TEXT, NUMBER, BOOLEAN, etc.)
- **Required (Yes/No)**
- **Unique (Yes/No)**

Add Field

You can create new fields to extend the table structure.

Edit/Delete Fields

Existing fields can be modified or removed.

This ensures data consistency and validation.

Permissions

This section manages user-level access control.

You can:

- Add users
- Assign roles
- Define access levels

By default:

- The owner has full access.
- Additional users can be given controlled permissions.

This ensures secure internal data management.

7 API & Settings

This section allows external systems to interact with the Data Store.

Public Read Access

- Allows anyone with the store ID to read records.
-  Warning: Exposes visible fields publicly.

API Credentials

- Generate API keys for secure access.
- Use the **API Base URL** to fetch or push data from backend systems.

Field Visibility

Control which fields are:

- Visible in API responses
- Hidden externally but still visible in dashboard

This enables secure and flexible integrations.

Reports Module

Analytics Dashboard

The **Reports Dashboard** provides a comprehensive view of WhatsApp Business performance, message engagement, template usage, and campaign analytics. It enables businesses to

monitor communication effectiveness, delivery health, and customer interaction metrics in real time.

This module is divided into two primary sections:

- **Overview**
- **All Insights**

Overview Section

The Overview gives a high-level snapshot of messaging and template performance.

Template Summary Metrics

Displays overall template status:

- **Total Templates**
- **Approved Templates**
- **Pending Templates**
- **Rejected Templates**

This helps monitor Meta approval performance and template compliance health.

Messaging Performance Metrics

Key communication statistics:

- **Total Messages**
- **Sent Messages**
- **Messages Delivered**
- **Messages Read**
- **Messages Failed**
- **Received Messages**
- **Delivery Rate (%)**
- **Read Rate (%)**

These KPIs help evaluate:

- Message reliability
- Customer engagement
- Communication success ratio

Messages Count (Time-Based Chart)

A graphical representation of daily message activity.

Tracks:

- Sent
- Delivered
- Read
- Failed

Includes:

- Date filter (monthly view)
- Visual trend comparison

This helps identify performance spikes, drop-offs, and delivery issues.

Engagement Analysis

Visual breakdown of engagement performance:

- Sent Volume
- Delivery Volume
- Read Volume
- Failed Volume

With percentage comparison such as:

- Delivery %
- Read %
- Failure %

This provides clarity on funnel performance:

Sent → Delivered → Read → Failed

Templates Performance

This section analyzes template usage and effectiveness.

Category Breakdown

Visual representation of template distribution by type:

- Marketing
- Utility
- Authentication

Helps understand template usage strategy across business functions.

Status Distribution

Displays:

- Total Templates
- Approved %
- Pending %
- Rejected %

Useful for compliance monitoring and template optimization.

Detailed Performance Table

Provides per-template analytics including:

- Template Name
- Type (Marketing / Utility / Authentication)
- Sent Count
- Delivered Count
- Read Count
- Read Rate %

This allows granular evaluation of individual template performance.

3 Campaign Insights (All Insights Section)

Provides campaign-level aggregated analytics.

Campaign Summary Metrics

- Total Campaigns
- Active Campaigns
- Completed Campaigns
- Total Sent
- Total Delivered
- Total Read

- Total Failed
- Delivery Rate %
- Read Rate %

This section helps evaluate marketing campaign effectiveness.

Campaign Performance Chart

Visual aggregated metrics across campaigns to:

- Compare campaign performance
 - Identify high-performing campaigns
 - Detect low engagement campaigns
-

AI Module

The **AI Module** enables businesses to create, train, deploy, and manage intelligent AI agents that can automate customer conversations across website and messaging channels.

It helps organizations:

- Automate customer support
- Provide instant responses
- Reduce manual workload
- Improve engagement and lead capture
- Deploy chat widgets on websites
- Integrate AI with live communication channels

The module contains the following sub-sections:

1. **AI Agents**
2. **Live Chat**
3. WhatsApp AI Agent

1 AI Agents Sub-Module

The **AI Agents** section allows businesses to create and manage AI-powered bots that respond to customer queries using configured data sources.

◆ **AI Agents Dashboard**

The main screen displays:

- List of all created AI Agents
- Agent Name
- Creation Date
- Connection Status (Connected / Not Connected)
- Configure button
- Create AI Agent option

Each AI Agent is displayed as a card with quick access to configuration.

+ **Create AI Agent**

Users can create a new AI agent by:

1. Clicking **Create AI Agent**
2. Entering the Agent Name
3. Clicking **Create**

Once created, the agent can be configured with knowledge sources and channels.

Configure AI Agent

Each AI agent can be configured under **Data Sources** to control how it answers user queries.

Data Sources

The AI agent learns and responds based on connected knowledge sources. There are four types:

Website

Allows the AI agent to fetch and learn content from a website.

Features:

- Add website URL
- Crawl and index website content
- View connection status (Available / Not Connected)
- Refresh website data

This enables the AI agent to answer questions based on website content.

Files

Upload documents for AI training.

Supported formats:

- PDF
- DOCX
- Max 100MB per file

Features:

- Upload knowledge documents
- Search uploaded files
- Manage document data

This allows the AI to respond based on internal documents, brochures, FAQs, etc.

Q&A

Manual question-answer training section.

Features:

- Add custom Q&A entries
- Search Q&A records
- Maintain structured answers

Useful for:

- Pricing questions
- Policy clarifications
- Predefined business responses

Channels

Connect the AI agent to communication channels.

Displays:

- Channel Name
- Connection Status
- Connect button

Channels allow the AI to respond on selected platforms.

AI Agent Preview Panel

On the right side of the configuration screen:

- Live conversation preview
- Test AI responses instantly
- Suggested query buttons
- Message input box

This allows businesses to test how the AI will respond before deployment.

Live Chat Sub-Module

The **Live Chat** section enables businesses to create and deploy customizable website chat widgets for real-time customer communication.

Live Chat Channels Dashboard

Displays:

- List of created chat channels
- Channel Name
- Created Date
- Actions:
 - View
 - Edit
 - Delete

- Create Channel button

Each channel represents a separate chat widget instance.

+ Create Live Chat Channel

Users can create a new chat channel by providing:

- Channel Name (Required)
- Website URL (Optional – used for widget customization)

After creation, the channel can be configured.

Live Chat Configuration

Once inside a channel, users can configure:

Identity Section

- Channel Name
- Display Name
- Support Phone (WhatsApp)
- Support Email
- Optional Connected Agent ID
- Upload Logo (JPG/PNG – max 5MB)

This defines how the widget appears to visitors.

Appearance Settings

Customize widget look and feel:

- Brand Color (Hex Code selector)
- Icon Position (Bottom-left or Bottom-right)

Ensures widget matches website branding.

Social Links

Auto-generated from:

- Support Phone
- Support Email

Displays WhatsApp and Email contact options.

Footer Settings

- Brand Name display
- Powered by wenext.ai branding

Live Preview Panel

Right-side real-time preview of:

- Home View
- Chat View
- Welcome message
- Chat button appearance
- Widget position

Changes update instantly for visual validation.

Edit Widget

Allows editing:

- WhatsApp Phone Number
- Welcome Message
- Button Color

After updates, click **Update Widget** to apply changes.

Embed Option

The **Embed** tab provides the script/code to integrate the widget into a website.

Businesses can:

- Copy embed code
- Paste into website HTML
- Deploy instantly

Purpose of Live Chat Module

Live Chat enables:

- Real-time visitor communication
- Lead capture
- Website engagement improvement
- Direct WhatsApp redirection
- Brand-consistent chat interface

How AI Agents + Live Chat Work Together

Businesses can:

- Connect an AI Agent to a Live Chat channel
- Allow AI to respond automatically
- Escalate to human agents when needed
- Provide hybrid AI + human support

This creates a complete conversational automation ecosystem.

3. WhatsApp AI Agent Sub-Module

The **WhatsApp AI Agent** module allows businesses to create and deploy AI-powered agents specifically for WhatsApp. These agents automate customer conversations, handle inquiries, provide service information, and assist with sales or support directly on WhatsApp.

This module enables businesses to:

- Automate WhatsApp conversations
- Provide instant responses 24/7
- Handle service or product queries
- Capture leads
- Share contact and business details

- Reduce manual intervention

WhatsApp AI Agents Dashboard

The main dashboard displays:

- List of created WhatsApp AI Agents
- Agent Name
- Business Name
- Business Type
- Status (Active)
- Created Date
- Edit option
- Delete option
- **+ Create AI Agent** button

Each agent is displayed in a card layout showing key business details and configuration type.

Create WhatsApp AI Agent

To create a new agent:

1. Click **+ Create AI Agent**
2. Fill in required details
3. Click **Create Agent**

Basic Information Section

◆ **Agent Name ***

The internal name for the WhatsApp AI agent.

Examples:

- ShopBot
- ConsultBot
- MedAssist

◆ **Business Name ***

The registered or operating name of the business.

♦ **Business Description ***

A short description explaining:

- What the business does
- Products or services offered
- Target audience

This helps the AI understand business context and generate accurate responses.

♦ **Business Type ***

Dropdown options:

1. **D2C (Direct-to-Consumer / E-commerce)**
For online stores selling products directly to customers.
2. **Services (Consulting, Professional Services)**
For service-based businesses like IT consulting, agencies, marketing firms, etc.
3. **Other (Information, Support Services)**
For informational platforms, support desks, or non-commerce services

Business type determines AI response structure and conversation logic.

Services Configuration (For Service-Based Businesses)

This section appears when **Services** business type is selected.

♦ **Website URL ***

Business website link for context reference.

♦ **Service Categories**

Comma-separated list of services offered.

Example:

- IT Consulting

- Digital Marketing
- Web Development

♦ **Service Areas**

Comma-separated list of geographic service areas.

Example:

- Hyderabad
- Bangalore
- Remote

♦ **Consultation Available (Toggle)**

Enable if customers can book consultations via WhatsApp.

This allows the AI to guide users toward consultation scheduling.

Contact Information Section

Defines how customers can reach the business through the AI agent.

♦ **Contact Phone**

Primary business phone number (with country code).

♦ **Contact Email**

Official business support email.

♦ **Website URL**

Business website link (if not already added).

♦ **Business Hours**

Operating hours.

Example:

9 AM – 6 PM, Monday to Friday

The AI uses business hours to:

- Inform customers when support is available
- Set expectations for response timing

Edit WhatsApp AI Agent

Existing agents can be modified using the **Edit** option.

Editable sections include:

- Agent Name
- Business Description
- Business Type
- Service Configuration
- Contact Information
- Business Hours

After updating details, click **Update Agent** to save changes.

Delete Agent

The delete option allows permanent removal of the WhatsApp AI agent configuration.

Once the Whatsapp AI Agent is created it is integrated into the whatsapp automation flow and the agent starts giving automatic replies to the users in the whatsapp chat .

Account settings module

The **Account Settings** module allows users to manage their personal account details, security settings, team members, and platform integrations.

This module ensures:

- Secure account management
- Team access control
- Integration with external services

- Custom campaign configuration

Sub-modules include:

1. General Settings
2. Team Management
3. Integrations
4. Billing
5. Business Accounts
6. Social Accounts

1 General Settings

The **General Settings** section allows users to manage their profile information, account security, and campaign keyword preferences.

It contains three tabs:

- Profile
- Password & Security
- Campaign Preferences

◆ 1.1 Profile

The **Profile** tab allows users to update personal and company details.

Fields:

- **First Name**
- **Last Name**
- **Email Address**
- **Phone Number**
- **Company**
- **Role** (View only – editable by admin)

Role Information:

- Role determines platform access level.
- Only administrators can modify user roles.

Action:

- **Save Profile** button updates account information.

◆ 1.2 Password & Security

This section allows users to securely update their login credentials.

Fields:

- **Current Password**
- **New Password**
- **Confirm New Password**

Password Requirements:

- Minimum 8 characters
- At least one uppercase letter
- At least one lowercase letter
- At least one number
- At least one special character

Action:

- **Update Password** saves changes securely.

This ensures account protection and prevents unauthorized access.

◆ 1.3 Campaign Preferences

This section manages opt-in and opt-out keywords for campaign automation.

When contacts send configured keywords, the system automatically updates their campaign subscription status.

◆ Opt-out Keywords

- Add keywords like:
STOP, UNSUBSCRIBE, OPT OUT
- When a contact sends these keywords, they are automatically unsubscribed from campaigns.

Add Button allows saving multiple keywords.

♦ **Opt-in Keywords**

- Add keywords like:
`START, SUBSCRIBE, OPT IN`
- When a contact sends these, they are resubscribed to campaigns.

♦ **Confirmation Messages**

You can configure:

- **Opt-out Confirmation Message**
- **Opt-in Confirmation Message**

These messages are automatically sent after subscription status changes.

Action:

- **Save Campaign Keywords** stores configurations.

2 Team Management

The **Team Management** module allows administrators to manage team members and control platform access.

It provides:

- Member listing
- Role assignment
- Business account access control
- Status management

♦ **Team Members Dashboard**

Displays:

- Member Name
- Email
- Role (User / Agent / Admin)
- Assigned Business Accounts

- Status (Active/Inactive)
- Edit option
- Change Password option
- Delete option

Search functionality is available to quickly locate members.

Add Team Member

Click **Add Member** to invite a new team member.

Required Fields:

- **Email**
- **Name**
- **Role** (User / Agent / Admin)
- **Password (Optional)**
 - Leave empty to auto-generate
 - Or use **Generate Random**

Business Accounts Access

- Select which business accounts the member can access.
- Options:
 - Select All
 - Deselect All

Only selected accounts will be visible to that team member.

Actions:

- **Add Member**
- **Cancel**

Edit Team Member

Allows updating:

- Name
- Role
- Status (Active/Inactive)

- Business Account access

Action:

- **Save Changes**

Change Password (Admin Control)

Admins can reset passwords for team members.

Fields:

- New Password
- Confirm Password

Includes password requirement validation.

Action:

- **Change Password**

Delete Member

Removes the team member from the system permanently.

Integrations

The **Integrations** module allows businesses to connect external platforms for automation and data synchronization.

Supported integrations include:

- Shopify
- WooCommerce
- Custom API
- Razorpay

◆ 3.1 Shopify Integration

Allows connecting a Shopify store to:

- Sync products
- Sync customers
- Sync orders
- Track abandoned checkouts

Connect Shop

Displays:

- Connected Shop URL
- Connection Date
- Currency
- Status
- Disconnect Option

Products Tab

Features:

- Search Products
- Filter by Status
- Sync from Shopify
- Sync to WhatsApp Catalog
- Create Product

Product table includes:

- Image
- Product Name
- Vendor
- Type
- Price
- Status
- Actions

Create New Product

Fields:

- Title
- Description
- Vendor
- Product Type
- Tags (comma-separated)
- Status (Draft/Active)
- Price (INR)
- SKU (Optional)
- Inventory Quantity
- Image URLs

Action:

- **Create Product**

Customers Tab

Displays:

- Customer Name
- Email
- Phone
- Shopify ID
- Sync Date

Includes search functionality and **Sync from Shopify** option.

Orders Tab

Displays:

- Order Number
- Customer
- Items
- Fulfillment Status
- Payment Status
- Total Amount
- Date

Filter options available for financial and order status.

Abandoned Tab

Displays abandoned checkouts:

- Checkout ID
- Date
- Customer
- Items
- Total
- Recovery Status
- Recovery Link

Includes **Sync Checkouts** button.

◆ **3.2 WooCommerce Integration**

Allows syncing WooCommerce store data similar to Shopify:

- Products
- Orders
- Customers

Includes:

- Add Integration
- Connection status
- Data synchronization

◆ **3.3 Custom API Integration**

Allows connecting external systems using custom APIs.

Used for:

- Syncing products
- Syncing orders
- Custom automation

Includes:

- Add Integration
- API configuration
- Status tracking

◆ 3.4 Razorpay Integration

Allows payment gateway integration for online transactions.

Connection Status

Displays:

- Connected / Manual
- Account ID
- Account Name

Options:

- Test Connection
- Disconnect
- Refresh

Payment Tabs

- Connect
- Payments
- Payment Links

Enables:

- Payment tracking
- Payment verification
- Link-based payments

4 Billing & Subscription

The **Billing & Subscription** section allows users to manage their active plan, monitor usage limits, view invoices, and explore add-ons.

It contains four tabs:

- Overview
- Plans
- Invoices
- Add-ons

◆ 4.1 Overview

The **Overview** tab provides a complete summary of:

- Current subscription plan
- Billing cycle
- Renewal date
- Usage statistics
- Team allocation
- Connected integrations

Current Plan Card

Displays:

- Plan Name (e.g., Enterprise)
- Plan Status (Current)
- Renewal Date
- Billing Period (Monthly/Yearly)
- Next Payment Amount

This section gives quick visibility into subscription health and renewal timeline.

Feature Utilization

Displays real-time usage against plan limits:

- Contacts
- Messages
- Agents
- Templates
- Campaigns
- WhatsApp Flows
- Automations
- Business Accounts

- Admins
- Users

Each metric includes:

- Current usage count
- Maximum allowed limit
- Progress bar visualization

This helps businesses monitor over-usage risks.

Integrations Summary

Shows:

- Connected platforms (e.g., Custom API, WhatsApp, Shopify, etc.)
- Number of active integrations

This gives visibility into connected systems affecting billing or usage.

◆ **4.2 Plans**

The **Plans** tab allows users to upgrade, downgrade, or compare subscription plans.

Billing Toggle:

- Monthly
- Yearly (Save 20%)

Available Plans:

Basic – ₹999/month

- Suitable for small businesses
- Limited contacts, campaigns, templates, and team size
- Ideal for startups

Professional – ₹2999/month (Most Popular)

- Higher limits
- Suitable for growing teams

- Supports advanced automation

● **Enterprise – ₹9999/month**

- Designed for large organizations
- Maximum limits
- Advanced integrations
- Priority support

Each plan displays:

- Pricing
- Feature limits
- Included modules

Users can select and activate a plan directly from this section.

◆ **4.3 Invoices**

The **Invoices** tab allows users to:

- View past payment history
- Download invoices
- Track transaction records

If no payments exist, the system displays:

“No payment history found”

Once payments are processed, invoices appear here chronologically.

◆ **4.4 Add-ons**

The **Add-ons** tab allows users to:

- View optional feature upgrades
- Purchase additional usage capacity

Examples (when available):

- Extra messages
- Additional agents
- More contacts

If no add-ons are available, the system displays:

“No add-ons available at the moment.”

Business Accounts

The **Business Accounts** module manages WhatsApp Business API accounts and webhook bot integrations.

It contains two tabs:

- Accounts
- Webhooks & Bots

◆ **5.1 Accounts**

This section manages connected WhatsApp Business Accounts.

Displays:

- Business Name
- Status (Active/Inactive)
- Created Date
- Phone Number
- Phone Number ID
- Business Account ID
- Business Profile Access

Add Account

Click **Add Account** to connect a new WhatsApp Business Account.

Two connection methods are available:

Embedded Signup

- Meta-hosted onboarding flow
- Connect a phone number without leaving the platform
- Automatically captures:
 - Business Account ID

- Phone Number ID
- Access Token

Requirements:

- Meta app configured with WhatsApp Embedded Signup
- Domain added in Meta Allowed Domains
- Phone number ready for SMS/Voice verification

Action:

- **Launch Embedded Signup**

Connect with Meta

- Redirect-based OAuth authentication
- Connect existing WhatsApp Business accounts
- Required for:
 - Sending messages
 - Template management
 - Campaign execution

Benefits:

- Automatic account detection
- Template approval management
- Real-time delivery tracking

Action:

- **Connect with Meta**

Disconnect Account

Removes the WhatsApp Business connection from the system.

5.2 Webhooks & Bots

This section allows integration of external bots or CRM systems.

Bot Configuration

Users can:

- Register external bots
- Set webhook URLs
- Generate API keys
- Regenerate keys
- Delete bots

Fields per Bot:

- Bot Name
- Status (Active)
- Bot Webhook URL
- API Key

API Usage Instructions:

To send messages to the CRM webhook:

Header:

X-API-Key: YOUR_API_KEY

Body Example:

```
{  
  "to": "+1234567890",  
  "text": "Your message"  
}
```

Message Flow

Receiving Messages

WhatsApp → CRM → Bot Webhook

Incoming WhatsApp messages are automatically forwarded to the bot webhook.

Sending Messages

Bot → CRM → WhatsApp

Bots send messages using the API key authentication.

Regenerate Key

Creates a new secure API key for the bot.

6 Social Media Accounts

The **Social Media Accounts** module manages connected social platforms for publishing and engagement.

Supported Platforms:

- Instagram
- Facebook
- LinkedIn

Tabs allow filtering by platform or viewing all connected accounts.

◆ **Platform Cards**

Each platform displays:

- Number of connected accounts
- Manage button

◆ **Connected Account Details**

Each account card displays:

- Account Name
- Account ID
- Connected Date
- Delete option

Manage

Allows:

- Viewing account details
- Managing posting permissions
- Controlling automation access

Refresh Button

Refreshes platform connection status.

Remove Account

Disconnects the selected social media account from the system.

Support Module

The **Support** module provides users with onboarding guidance and direct access to customer assistance.

It contains two sub-modules:

1. Getting Started
2. Contact Support

This module ensures users can quickly set up their WhatsApp automation and get help whenever needed.

1 **Getting Started**

The **Getting Started** section acts as a guided onboarding checklist for launching WhatsApp automation successfully.

It presents a structured, step-by-step setup flow to help businesses go live on WhatsApp.

Quick Setup Guide

A visual onboarding panel titled:

“Get Started with WeNext”

It outlines everything required to enable WhatsApp automation for your business and provides a clear success path.

Step-by-Step Setup Flow

01 A WhatsApp Business Number

Users must have a dedicated phone number for their WhatsApp Business API.

Requirements:

- Must not be currently linked to WhatsApp
- Fresh SIM or previously deleted WhatsApp account

This ensures smooth API onboarding and verification.

02 Meta Business Manager

Access to a Meta Business Manager account is mandatory.

Users can:

- Create a new Meta Business Manager account
- Sign up via business.facebook.com

This account is required for:

- WhatsApp Business API approval
- Business verification
- Template approvals

03 Business Details

Users must prepare legal business documentation.

Required details:

- Legal Business Name
- Website
- Address
- Tax ID

This information is used during Meta verification and account approval.

04 Online Verification

Meta requires proof of business legitimacy.

⚠ Important:

- Website name must exactly match the legal business name.
- Business details must be consistent across documents.

Verification ensures:

- Authentic business presence
- Approval for WhatsApp API messaging

05 Message Strategy

Users should define automation priorities before going live.

Suggested automation categories:

- Welcomes
- Leads
- Orders
- Support

This helps structure WhatsApp flows and campaigns effectively.

06 Payment Method

Users must select a subscription plan and configure billing.

Supported method:

- Credit / Debit Card
- Monthly or Annual billing

Subscription activation enables full platform access.

2 Contact Support

The **Contact Support** section provides direct assistance from the WeNext support team.

➡ **WhatsApp-Based Support**

When users click **Contact Support**, the system:

- Redirects to the WhatsApp application
- Opens the official WeNext Business chat
- Allows direct conversation with the support team

This enables:

- Real-time assistance
- Faster issue resolution
- Direct onboarding help
- Technical troubleshooting support

◆ **Why WhatsApp Support?**

- Instant communication
- No ticket delays
- Easy file and screenshot sharing
- Seamless support experience within WhatsApp
